

Object—elements that represent instances of a class or of classes in the UML model

Class—represents an object or a set of objects that share a common structure and behavior

1. Please tell if the following examples are objects:

A The Earth    B Checking account    C Window    D Wall clock    E Computer

2. What are differences between objects and classes? Please present an example.

A Class is a blueprint for an object. classes describe the type of objects, while objects are usable instances of classes
