

Class diagram---capture the attributes and operations of each class as well the relationships that exist between classes; represented by a rectangle box with a) name; b) attributes; c) operation.

Visibility: Public: + Protected: # Private: -

1. A class encapsulates state (attributes--- has a type **[optional]**) and behavior (operations---has a signature **[optional]**). But the class name is the only mandatory information.

2. The class --COMP3700 Software Design and Modeling---has four quizzes, three exams and five projects. The full credit is one hundred points. Also, this class provides topics: 1) class diagram and 2) use case. Finally, a letter will be presented at the end of this semester.

2.1 Please list class attributes

2.2 Please list class operations (Methods)

2.3 Please specify class visibilities

2.4 Please list parameters of operations (Methods)
